

Instalando e aplicando o Crystal Reports

Passo 1

Primeiro é necessário fazer o download do Crystal Reports, que está neste link:

<http://goo.gl/kazc0l>

Install Executable	Fixed Issues	MSI 32 Bit	MSI 64 Bit	MSM 32 Bit	ClickOnce 32/64	ClickOnce "Homesite"	WEB XML Deployment

Passo 2

A instalação é fácil e não precisa de nenhuma configuração

Passo 3

Após a instalação, crie um projeto em Windows Form Application para assim poder usar o Crystal Reports

Passo 4

Após isso, você deve adicionar a referência do Crystal Reports. Para isso, vá em References/Add References no Solution Explorer

Em Extensions escolha **CrystalDecisions.CrystalReports.Engine**.

Selecione Crystal Reports para poder fazer a manipulação do relatório

Passo 5

Irá abrir essa tela, onde você irá o **Padrão**

Agora iremos conectar com o Banco de Dados , no caso o Access. Podemos também escolher outros Bancos de Dados.

Clique em Concluir.

Agora arraste as informações contidas na tabela para o RelatorioExemplo.rpt

Passo 6

Agora adicione na ToolBox o **CrystalReportViewer** para visualizar.

O programa ficou assim

```
using System.Text;
using System.Threading.Tasks;
using System.Windows.Forms;
using CrystalDecisions.CrystalReports.Engine;

namespace CrystalReport1
{
    public partial class Form1 : Form
    {
        public Form1()
        {
            InitializeComponent();
        }

        private void crystalReportViewer1_Load(object sender, EventArgs e)
        {
            try {
                ReportDocument cryRpt = new ReportDocument();
                cryRpt.Load(@"C:\Users\Leo\Documents\Visual Studio 2012\Projects\CrystalReport1\CrystalReport1\CrystalReport1.rpt");
                crystalReportViewer1.ReportSource = cryRpt;
                crystalReportViewer1.Refresh();
            }

            catch (Exception y) {
                MessageBox.Show("Erro: " + y);
            }
        }

        private void Form1_Load(object sender, EventArgs e)
        {
            this.WindowState = FormWindowState.Maximized;
            crystalReportViewer1.Width = this.Width;
            crystalReportViewer1.Height = this.Height;
        }
    }
}
```

Código

```
private void Form1_Load(object sender, EventArgs e)
{
    this.WindowState = FormWindowState.Maximized;
    crystalReportViewer1.Width = this.Width;
    crystalReportViewer1.Height = this.Height;
}

private void crystalReportViewer1_Load_1(object sender, EventArgs e)
{
    try {
        ReportDocument cryRpt = new ReportDocument();
        cryRpt.Load(@"C:\Users\Leo\Documents\Visual Studio
2012\Projects\CrystalReport1\CrystalReport1\CrystalReport1.rpt");
        crystalReportViewer1.ReportSource = cryRpt;
        crystalReportViewer1.Refresh();
    }
    catch (Exception y) {
        MessageBox.Show("Erro: " + y);
    }
}
```

E por fim, o relatório.

O Crystal Reports é muito útil na criação de relatórios fazendo com que um projeto fique muito mais organizado.
